System Administration and Support Service Offering

AVEVA PI System

Dear Customers and Partners,

At Optimate, we recognise that the value delivered through operational data solutions does not end at commissioning.

As a trusted AVEVA PI System partner, we offer a full-service support model which optimises system availability and data quality in cost effective and flexible manner.

Our coordinated team from Brisbane, Sydney, Perth, Melbourne and Pune offers a range of business hour and 24x7 support services at highly competitive rates.

We welcome the opportunity to discuss further and tailor our support offering to the needs of your business.

Kind regards,

Mark Darlington
CEO

About Us

For over 25 years Optimate has been a leading consultancy and integration company in the field of operational data.

Optimate integrates and combines operational, real-time data from contrasting sources into meaningful and valuable end-user information.

Our services cover the end-to-end path of Operational Data, from Process Control & IOT, Integration & Storage, Context & Quality to finally Information & Insight. This places reliable trusted data in the hands of stakeholders allowing them to generate ground-breaking insights instead of fixing integration and quality issues.

Our skills and experience have been recognized across multiple industries, inside Australia and abroad. These award-winning solutions are also a result of how we work and execute against our values of Accountability, Collaboration, Trust and Transparency.

If you have operational data, you can trust Optimate to enable operational intelligence.

Approach

Optimate tailors the support process to align with your business

Support services can be integrated into your existing IT support processes.

- This enables seamless dispatch between various resolver groups, both inside the organisation and with other support partners.
- Typically our team is onboarded onto the internal IT service management system as Level 2 or Level 3 support agents.

Alternatively, Optimate also provides a stand-alone support process

- A secure, ticketed support portal is provided via the Zoho service management platform.
- Requests can be raised via email, web portal or via a dedicated phone number.
- End users can view the progress of open tickets.
- Internal power users have access to a knowledge base of system specific configurations, known issues and established solutions.

Transparency and proactiveness around service health allows for early intervention

Regular reporting and review meetings provide oversight of the PI system

- Optimate will provide a status report, typically on a weekly basis, encompassing project updates, status of service tickets and any emerging issues which may be mitigated.
- Monthly support meetings allow for deeper discussion around critical tickets and systemic issues and oversight of where support hours are being utilised, to ensure alignment with business priorities.

Tickets

Optimate's Team

A diverse team with a broad range of industry and technology experience

Optimate's support model provides unique value through our blended team; located within Perth, Sydney, Melbourne and Brisbane, Australia and Pune, India

- The geographic diversity of our team offers increased flexibility to our customers through broader business hour coverage and accelerated resourcing to meet changes in demand.
- Optimate's offshore support rates are highly competitive, whilst still offering access to a highly experienced team of PI professionals.
- Our Perth, Sydney, Melbourne and Brisbane based engineers enable face-to-face discussions and on-site support Australia wide.

Optimate are experts at all aspects of the PI system

- Optimate's PI engineers have a minimum 8+ years experience in design, deployment and support of PI systems, interfaces/connectors/adapters and PI Vision.
- Our Senior and Principal engineers are accredited by AVEVA (PI System Infrastructure Specialist/PI System Installation Specialist).

Support Service offerings

Optimate offers support propositions to address PI support from a customer perspective and combine cost efficiency with world class PI engineering support.

- Business Hours Support and 24*7 Support cover the same scope and only differ in service hours.

All base services are offered as either a fixed number of tickets, per severity category per year, or as a fixed number of support hours, per severity category per year.
